1. The system shall be able to process the data and generate the report.
2. The system shall be able to generate the report in the form of a table.
3. The system shall be able to generate the report in the form of a chart.
4. The system shall be able to generate the report in the form of a graph.
5. The system shall be able to generate the report in the form of a map.
6. The system shall be able to generate the report in the form of a video.
7. The system shall be able to generate the report in the form of a audio.
8. The system shall be able to generate the report in the form of a text.
9. The system shall be able to generate the report in the form of a image.
10. The system shall be able to generate the report in the form of a document.
11. The system shall be able to generate the report in the form of a presentation.
12. The system shall be able to generate the report in the form of a website.
13. The system shall be able to generate the report in the form of a mobile application.
14. The system shall be able to generate the report in the form of a cloud storage.
15. The system shall be able to generate the report in the form of a social media.
16. The system shall be able to generate the report in the form of a email.
17. The system shall be able to generate the report in the form of a sms.
18. The system shall be able to generate the report in the form of a whatsapp.
19. The system shall be able to generate the report in the form of a telegram.
20. The system shall be able to generate the report in the form of a discord.
21. The system shall be able to generate the report in the form of a slack.
22. The system shall be able to generate the report in the form of a teams.
23. The system shall be able to generate the report in the form of a zoom.
24. The system shall be able to generate the report in the form of a google meet.
25. The system shall be able to generate the report in the form of a microsoft teams.
26. The system shall be able to generate the report in the form of a skype.
27. The system shall be able to generate the report in the form of a jitsi.
28. The system shall be able to generate the report in the form of a rocketchat.
29. The system shall be able to generate the report in the form of a mattermost.
30. The system shall be able to generate the report in the form of a gitter.
31. The system shall be able to generate the report in the form of a matrix.
32. The system shall be able to generate the report in the form of a nextcloud.
33. The system shall be able to generate the report in the form of a owncloud.
34. The system shall be able to generate the report in the form of a syncthing.
35. The system shall be able to generate the report in the form of a bitbucket.
36. The system shall be able to generate the report in the form of a github.
37. The system shall be able to generate the report in the form of a gitlab.
38. The system shall be able to generate the report in the form of a bitbucket server.
39. The system shall be able to generate the report in the form of a github enterprise.
40. The system shall be able to generate the report in the form of a gitlab enterprise.
41. The system shall be able to generate the report in the form of a bitbucket data center.
42. The system shall be able to generate the report in the form of a github actions.
43. The system shall be able to generate the report in the form of a gitlab ci/cd.
44. The system shall be able to generate the report in the form of a bitbucket pipelines.
45. The system shall be able to generate the report in the form of a github workflows.
46. The system shall be able to generate the report in the form of a gitlab runners.
47. The system shall be able to generate the report in the form of a bitbucket agents.
48. The system shall be able to generate the report in the form of a github self-hosted runners.
49. The system shall be able to generate the report in the form of a gitlab self-hosted runners.
50. The system shall be able to generate the report in the form of a bitbucket self-hosted runners.
